GB Tech Kicks Commercial IT Department into Overdrive

GB Tech's Commercial IT Department has experienced several recent positive events within the last quarter of 2007. It began with the hiring of a full time manager for the department, Mr. Richard Hindman. Richard brings excellent credentials in both education and experience in the IT arena. Most important he continues the entrepreneurial atmosphere around this GB Tech commercial business area.

Then in Nov, 2007 GB Tech acquired Eagle Managed Services, an established IT provider. This acquisition is expected to bring new revenue and excellent new capabilities for the GB Tech Commercial IT Business. The new capabilities include the new employees with their exceptional skill mix, new equipment and software, new customers, new business relationships with suppliers & associates and new operations. The result is increased performance for our existing customers and new customers!

Further good news was revealed in November, when we were notified that GB Tech was selected in a competitive proposal environment to renew our contract with the Port of Galveston to provide them with IT Services.

We are looking forward to a most successful future with the GB Tech Commercial IT Business Unit.
