

New Contract for GB Tech

GB Tech wins contract with the United States Geological Survey (USGS) contract. This new contract began on July 1st. The contract is located at the Stennis Space Center in Mississippi and provides technical services to the USGS Hydraulic Instrumentation Facility. This was a set-aside for a Service Disabled Veteran Owned Small Business (a mouthful!) so we teamed with an excellent one, Skylla Engineering of Houston. There are 20 positions on the contract with two (2) open positions that include an Electronic Technician I and a Laboratory Technician. The employees support a Testing Lab, Warehouse, Electronic Repair Shop, Information Management and a unique-in-the-world Hydraulic Test Lab. We will be supporting this customer for 5 years, with all options enacted. We organized such that GB Tech provided the Program Manager, Tim Brogdon. This win opens a new customer support area (USGS) and is the first of what is to be called the Eastern Region Support area. With this success in hand we are now settling down to manage the contract and to continue to expand GB Tech in the Eastern Region.

This is an excellent win that was the direct result of understanding our customer, providing the best management and technical solution and the best overall value to the customer.
